

Aquaculture Market

Michael Paquette, Hubbs-SeaWorld Research Institute writes:

"As an aquaculture engineer, working with salt water systems, the pump on a system holding thousands

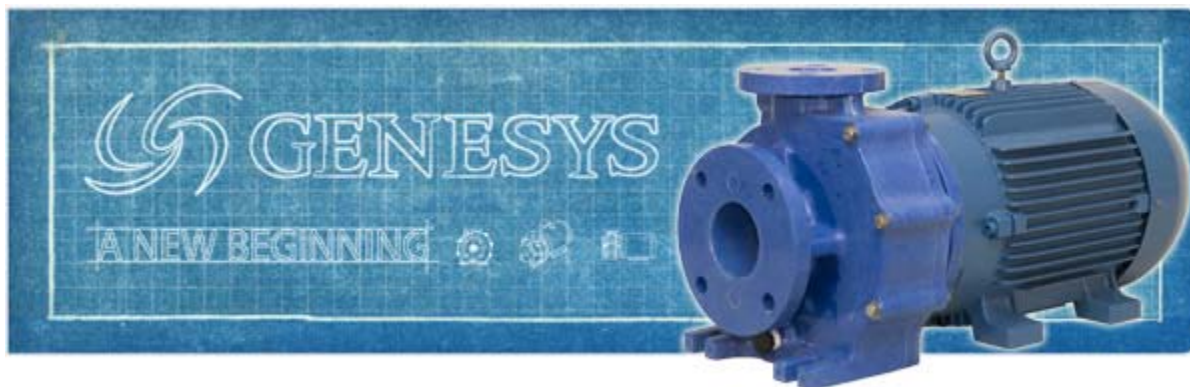

of kilograms of fish is an important selection. To me, a good system pump will be reliable, energy efficient, quiet, and will put out lots flow at low head. Finding these traits in available pumps at a reasonable cost had been pain staking. Anticipating the release of the Genesys line which had promises of meeting all my desires, I hopped on board and put in three units. I'm happy to say, I wasn't disappointed."

Our sales and engineering team is ready to help you place these pumps out into operation now! If you have some accounts that currently are utilizing ANSI B73.1 or B73.5M pumps, make sure to call us as we like nothing more than to strategize together on how to win replacement business. Don't hesitate to lean on us for:

- Performance plots
- Competitor comparisons
- Operational costs & savings
- ROI Calculations

We'd like to thank all of you for your business and look forward to working with you on future Genesys applications!
